1:Lipkind E-5 (1937) 1948 SP9 Caraja SP9

Weapons.—The *Carajá* use bows and arrows (pls. 20, *bottom, left;* 21, *left* and *center*), and their mythology indicates aboriginal use of the spear thrower for hunting monkeys. Recently, they have used a spear thrower of the upper Xingú River type for sport.

Pottery.—Pottery vessels include several forms of plain ware (fig. 20).

SOCIAL AND POLITICAL ORGANIZATION

The kinship structure may be described as double descent. Both lines are important, the greater emphasis falling on the mother's line, and both lines serve different functions. Village citizenship, adoption, and the closest affectional ties are reckoned in the mother's line. Moiety membership and the offices of chief, priest, and food-divider are patrilineally inherited.

The fundamental unit of social organization is the village. Every village has one or more ioló, children of chiefly line, designated by the chief for preferential treatment by the members of the village. The chief names the ioló who is to succeed him or, if he fails to do so, the village makes the choice at his death. Girls of chiefly line are similarly chosen for preferential treatment; each of them is known as the "hidden woman." There is some indication that women functioned as chiefs in former times, but today there is no woman chief. The chief has no coercive powers but directs the village by recognizing the will of the majority in such matters as the selection of camp and garden sites and the announcement of a move at change of season. His principal function is to act as peacemaker, and people readily submit to his adjudication. Because of the importance of religious ceremonials, the priest and the shaman frequently exercise more authority than the chief. When all three offices are vested in a single individual, his authority may be considerable, but it is kept in check by the right of a discontented person to move at any time to another village.

Within the village the important unit is the household. Residence being matrilocal, a household consists of sisters, their husbands, children, and the husbands of grown daughters. Marriage is restricted to one's own generation, the preferred mate being a cousin on the mother's side. There is no sanction but ridicule against wrong marriages, and there are many cases of cross-generational marriage. Marriage is predominantly monogamous, but a few instances of polygyny and one of polyandry were encountered. The avunculate is very important and involves many social and especially ceremonial duties. Cooperation in the household is close and in the village fairly close. In addition, villages are grouped together in ceremonial units, generally consisting of three or four neighboring villages, which celebrate important feasts jointly. This ceremonial unit acts as an insurance group when a village's crop fails or its fish supplies grow scarce. Beyond this, the only intervillage ties

/203 cont./

361 The houses in general are oriented in such a way that one long side faces northwest, north, or northeast, thus providing shade.

[592] [340] Each house is occupied by only one family; to each house there generally belongs a mat wall, a supply stand, and one or two hearth areas.

[346] The mask hut lies away from the village, at a distance of about 200 meters.

684 The villages of the Karajá are small; many consisted of only one or two houses, the largest of eight huts (1). Ehrenreich be-

1. Rufino has already reported that the villages of the Karajá have only eight to ten huts on the average. Rev. trim. 10, p. 208.

lieves that this dispersion must be traced back to a lack of means [511] of subsistence. This is scarcely to be assumed, since there is sufficient food, especially fish. In my opinion, it is conditioned first [578] by the many disputes that seem to prevail among the families of [571] the Karajá and lead to the departure of some of them, and then by the prevalence of personal attitudes concerning the feeling of sociability; many families live permanently isolated in one place because they happen to like it there.

It is noteworthy that the villages decrease in size from north [166] to south. This may be explained by the direction of migration of the Karajá: the bulk of them still live in the north; toward the south, the first to be sent are advance groups, which, of course, are small in number.

361 484 On journeys the Karajá pitch camps of mat roofs or walls, in the shade and shelter of which they live and sleep. The walls are, of course, oriented in such a way that they provide as much shade as possible and as long as possible; hence they usually stand approximately from west to east, and likewise arranged in rows (Pl. 13, Ill. 1). If a village is moved, the Indians live under mat walls until the houses are erected (Pl. 41, Ill. 2).

221 361 The villages do not remain permanently in one place. During the dry season, the Indians live on the sandbanks of the river, which,

361 [364] beyond endurance, compelling them, finally, to pull down their huts and move to a new site, perhaps to some other sand-bar. This is a case of moving the residence instead of the garbage. During the rainy season, or when the sand bottoms are submerged, which may not occur until two or three months after the rains begin, the Karayá dwell on the [342] high banks of the mainland. Here, the huts are much better constructed, resembling the dwellings of "civilized" Brazilians.

342 184 It is seldom one sees among primitive peoples, such substantially constructed huts as those of the Sambiõa division. Here is seen the greater industry, the greater activity, and the better condition in every respect of the free, unmolested sons of the wilderness in comparison with their "tame" brethren who exist in more destitute circumstances, though in contact with, and under the influence of the "civilized" people—the semi-barbarous Brazilians. The dwellings of 342 the Sambiõa are not placed in disorder, but are arranged in 363 long rows, forming regular streets. "They make a favorable impression upon the visitor, because the streets appear clean and the huts orderly, comfortable and inviting." The four 361 Sambiõa villages each contain sixty, thirty, forty-five and 162 ninety huts, respectively, and each hut is occupied by one or 592 two, or more, families.

352 The furniture in these primitive abodes is very simple. The floor, which is bare earth, is covered with matting made [285] by braiding together the long, slender leaves of the burity-[513] palm. The occupants sleep on this matting without any other bedding whatever, save a round billet of wood for a pillow upon which the neck rests, but not the head, Japanese 353 fashion. From the plates, or roof supports, hang baskets of various forms and sizes, in which are kept the bright feathers that are used in decorative work and ornament making. Finished ornaments and decorations made of brilliant feathers, pieces of regalia, bows and arrows in a finished and unfinished state, spear-throwing sticks and various small articles are also seen stuck into or suspended from the roof; while
